Oakline Announces its Investment in Anark

August 6, 2025

Oakline Holdings ("Oakline"), a Boston & Toronto based firm focused on investing in high-quality vertical market software businesses, is pleased to announce its investment in Anark Corporation ("Anark"), a Colorado based industrial software company providing technical data publishing and collaboration solutions.

Anark is a proven software supplier serving aerospace, defense, transportation, high tech and other industrial manufacturers. Its software extends the digital thread beyond traditional systems, empowering engineering, manufacturing, and supply chain teams to accelerate decision-making, reduce costs, and improve product quality. Anark integrates with existing engineering tools to deliver powerful 3D technical data and secure, collaborative workflows to the people and processes across the extended model-based enterprise. With this investment, Oakline seeks to build upon Anark's market-leading position to expand its footprint and enhance its product offerings within the digital thread ecosystem.

"Partnering with Oakline is a significant opportunity to build on our success with the world's most innovative manufacturers and accelerate the next phase of our growth," said Fred Waugh, CEO of Anark. "As the industry shifts from legacy 2D documents to fully digital, 3D model-based processes, manufacturers need solutions that bridge engineering, manufacturing and the supply chain."

"We are thrilled to be partnering with Anark's talented team to build on our market-leading position providing best-in-class engineering software to the industry," said Joe Mingail, Founder and CEO of Oakline. "We look forward to continued growth through continued investment and innovative service."

Accelerate Innovation with Model-based Collaboration

Improve cycle times, customer visibility, and supplier collaboration with secure, universal access to digital product definition. Anark simplifies model-based publishing and collaboration so your teams can focus on speed, quality, and innovation.

Beware the Model-based Collaboration Gap

Your existing platforms promised a closed-loop digital thread to support the model-based enterprise (MBE), but they continually fall short. Complex 3D models and data management systems leave critical gaps in your workflows that lead to delays, scrap, and quality issues.

Anark changes that.

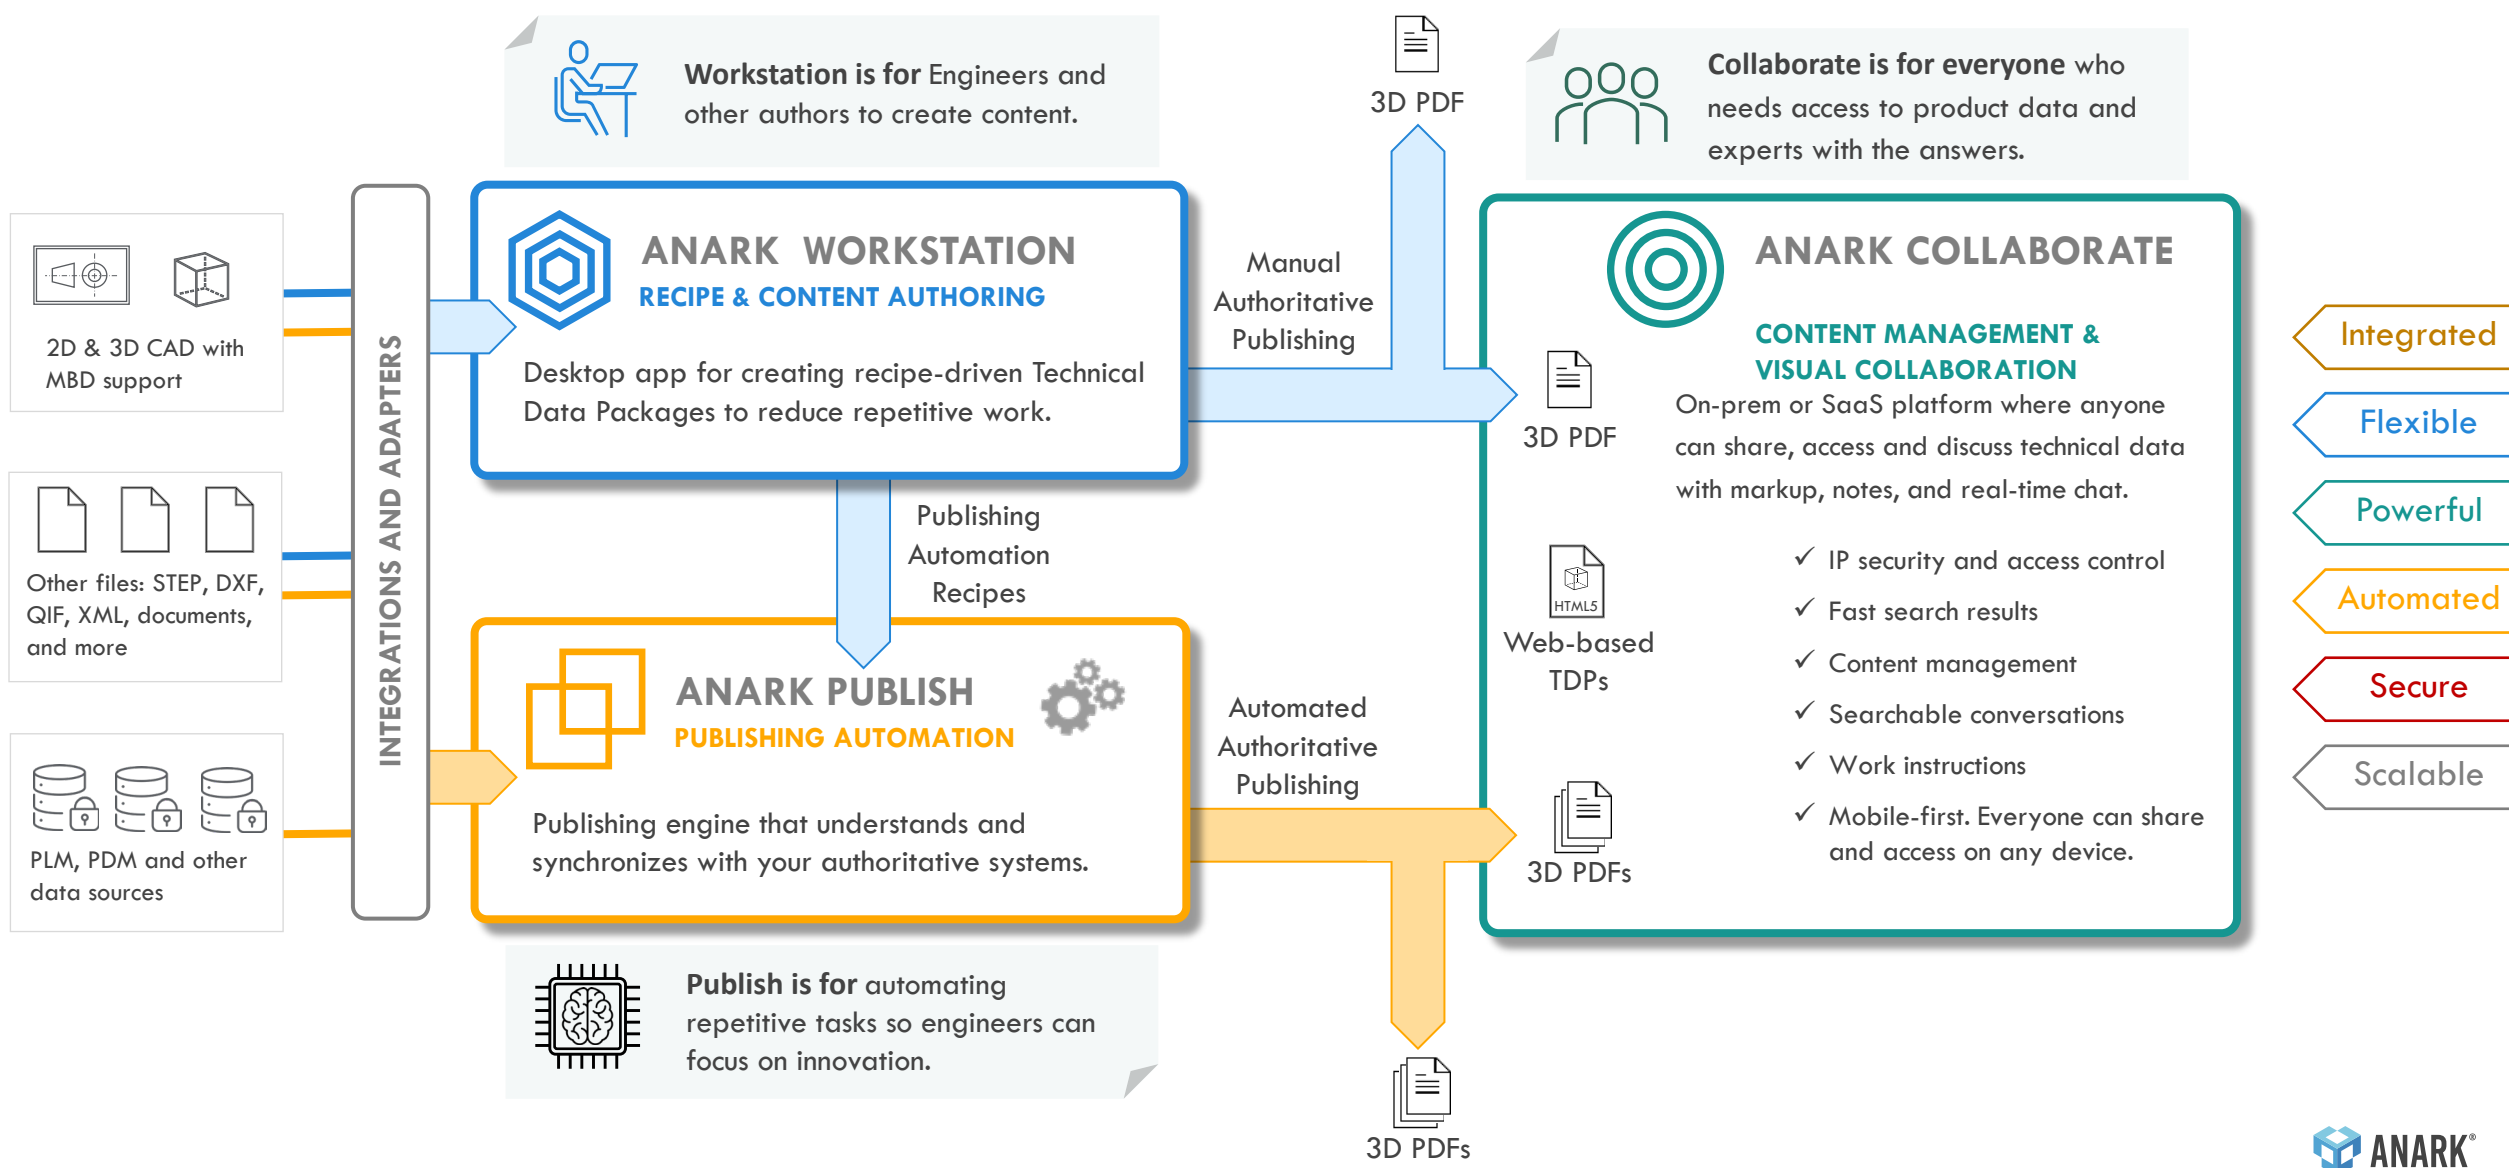

Whether you're starting with 3D models or advancing to MBE level 6, Anark delivers engineering data to everyone across your digital engineering and manufacturing processes.

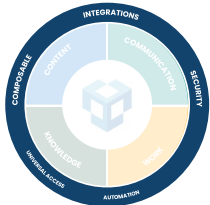

Model-based publishing and collaboration

Workstation - Publish - Collaborate with PLM, MBD CAD, more

Role Based Access Controls

Flexible, enterprise grade access controls and IP protection keep content secure

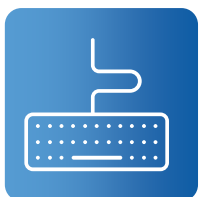

More Than Pre-Configured Roles

Create unlimited custom roles, configured to meet the unique needs of all your collaboration use cases, internally and externally with customers and suppliers.

Content Classifiers

Create powerful access rules and apply them to roles. Grants access to content with matching Content Classifier attributes.

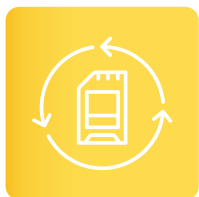

IdP Single Sign on (SSO)

Unified login through your existing identity provider (IdP) using SAML

IdP SCIM Provisioning

Synchronized provisioning of users, their role and group assignments through mapped IdP attributes.

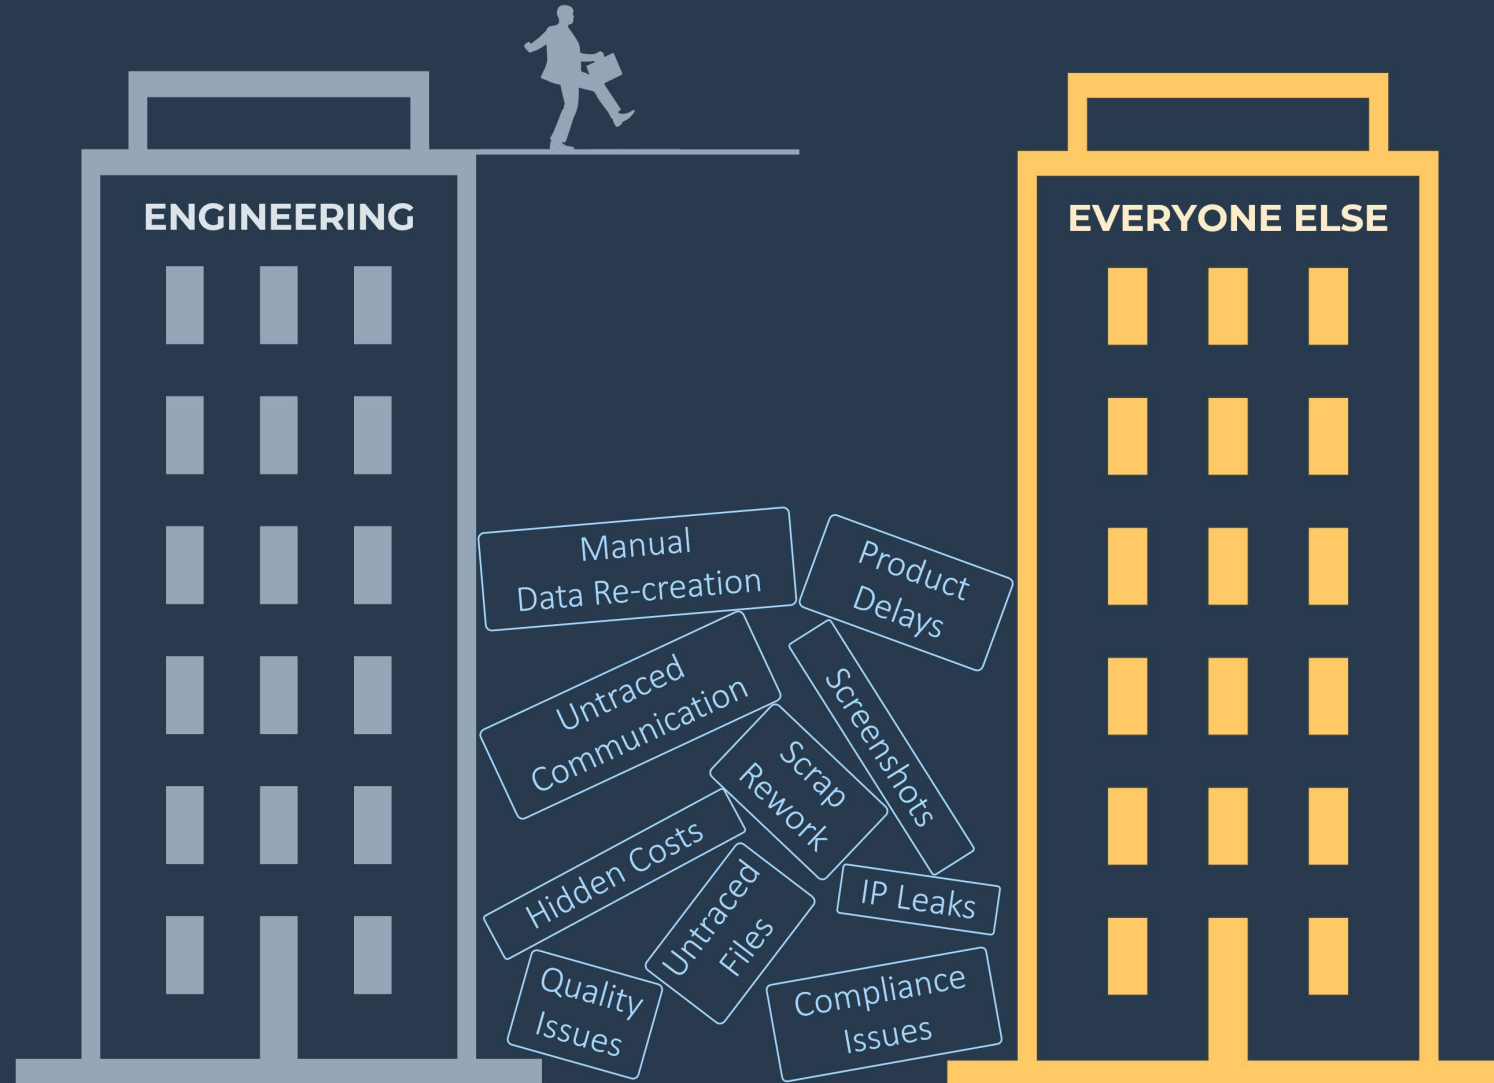

API First

All access to content is through REST APIs. Optional external access control using PLM, ERP, or any other authority is available.

MBD and PLM integration updates

MBD and PLM integration updates

- Teamcenter - NX Data Publishing via Rich client or Active Workspace with GUI-Based Recipe and Template Selection
- Teamcenter - Publishing of CREO MBD data via (IPEM)
- Teamcenter - 3D PDF generation via workflow handlers
- Windchill - Automated Collaboration Activity Creation from Windchill packages, prepopulated with relevant content and users to improve efficiency and consistency
- Windchill - Packages now support linking to all related content items and associated Collaborate activities
- Both – Support for error handling and publishing restart options to streamline troubleshooting and processes continuity via recipes, templates or publication parameter adjustments

Customer success stories

BETA Technologies: Delivering FAA Compliance and Collaboration with Anark 3D TDPs

Page | 1

“A central part of our R&D team’s mission is to deliver a robust design and engineering definition package that meets the FAA type certification aerospace regulatory requirements, and which can be leveraged by our supply chain.” – *Jesse Cannon, Configuration Management Engineer, BETA*

Wabtec Corporation: The Evolution of a Model-Based Digital Thread

“We’re moving from manual, document-based processes to one where the model carries the metadata—and the business consumes it automatically. That’s the real power of the digital thread.” – *Allen Garver, Process Excellence Engineer, Wabtec*

Purdue University: Empowering Tomorrow’s Engineers with a Digital Thread

Purdue University Prepares 650+ Future Engineers
Each Semester with Anark Collaborate

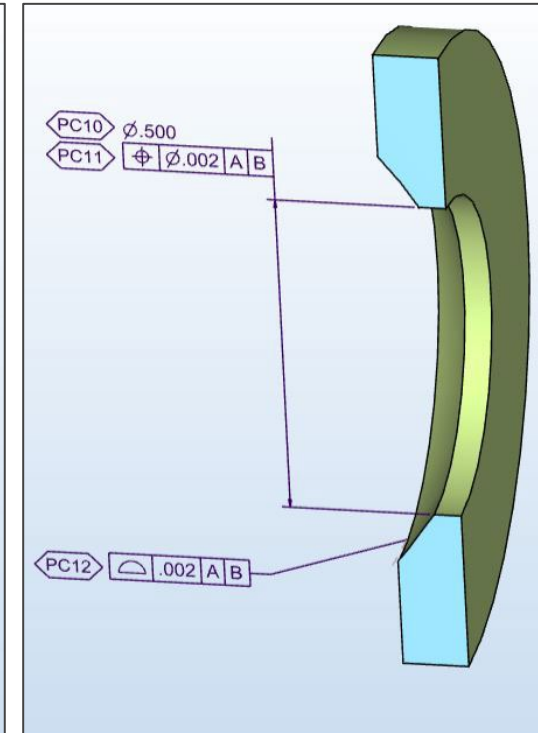

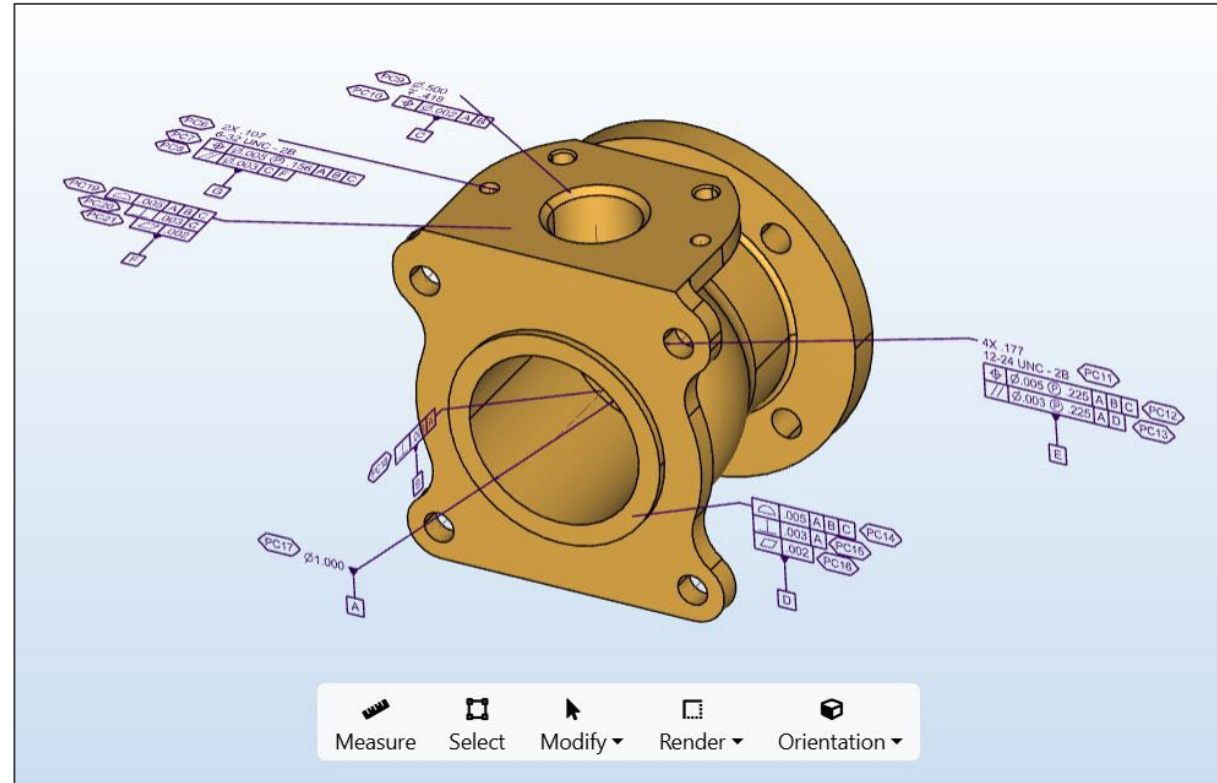

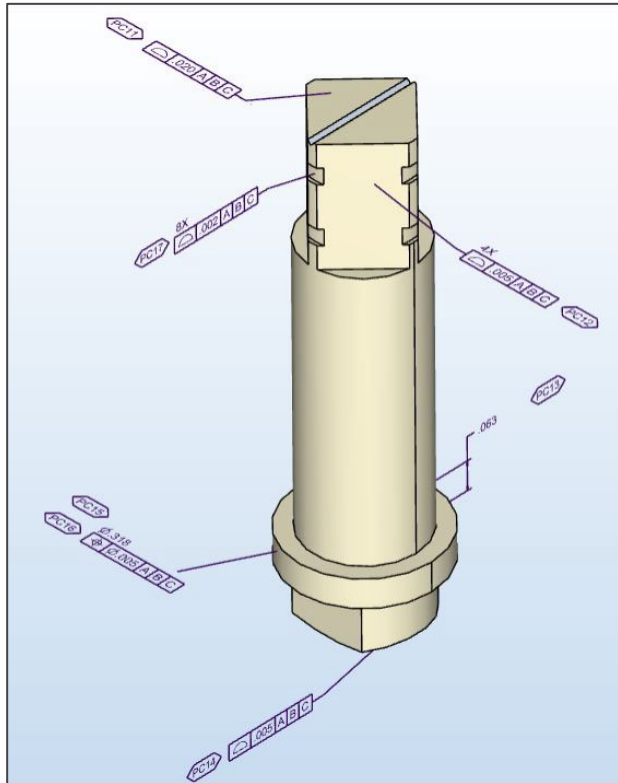

Page | 1

“If you’re entering a company that still relies on 2D drawings, you should be asking why. That may be a sign they’re behind the curve.” – *Travis Fuerst, Associate Professor of Practice, Purdue University*

Product Preview: Content Centric Collaboration

Upcoming events

- September 11-12, 2025: Nordic MBE Forum - Malmo, Sweden
- September 22-25, 2025: GPDIS, Phoenix
- October 16, 2025, Content Centric Collaboration Webinar - Virtual
- November 17-20, 2025: Defense Manufacturing Conference - Orlando
- March 2-5, 2026: 3D Collaboration and Interoperability Congress – Golden, CO
- April 14-16, 2026: MBE & QIF Summit – Chicago
- April 27-30, 2026: PTC/USER Global Summit – Las Vegas
