

Until there's teleportation, there's Anark Publish.

Engineering and operations teams at manufacturing companies lose 50% of their time looking for, organizing, and sharing product data. Without a time machine (or wormhole) there's no way to reclaim these thousands of wasted hours... until now. Get to know Anark Publish, the integrated publishing engine that understands and automates technical data package (TDP) creation, so no one has to do it manually anymore. Give your teams their time back, so everyone can innovate faster.

3 Ways Anark Publish Speeds Innovation through Automation

Automated TDP creation 40X faster than manual

Everyone gets the right data every time with zero hassle

PDM/PLM synchronization ensures accurate data

Sharing Data Today is Repetitive, Confusing, and Slow

For most manufacturers, the process of packaging and sharing data and communication looks like this:

Step 1: TDP Authors Waste Time on Manual, Repetitive Work

Step 2: TDP Authors Struggle to Make Data Easier to Consume

Step 3: Users Receive the Files and Struggle to Understand

TDP authors face the same questions and repeat the same tasks every time they need to share data.

- How should I package data?
- How should I explain it?
- · For how many audiences?
- What software programs?
- · Have I got everything?
- Am I sure?

Trying to make data easy to consume requires a lot of work and the creation of multiple files, often duplicating work.

with TDP authors creates even more files and isn't centrally tracked.

Users try to make sense of it all. Q&A

Add Integration and Automation with Anark Publish

Anark Publish lets you automate the entire process so that no one has to get involved in creating TDPs. Integration with your systems means that no matter your environment, Anark Publish understands where your data is located and intelligently pulls required data components together into clear, consistent TDPs that everyone can understand and use.

Additionally, Anark Collaborate is a fully-featured modern collaboration platform that allows for centralized content management and traceability.

Step 1: Data is Intelligently Extracted from Any Source

Step 2: TDPs are Created Automatically

Step 3: TDPs are Managed Centrally for Any User on Any Device

ANARK PUBLISH

Anark Publish connects to one or more of your systems, synchronizing TDP creation with your workflows.

INTELLIGENT TRANSLATION

Anark Publish understands your data, and translates it into TDP components for easy consumption.

▼ TDP TEMPLATES

Publish automatically generates TDPs with consistent layout and interactive elements for all data components including BOM, Drawings, 3D, PDFs & attachments.
